

The operating system for AI-first customer experience.

Vela OS turns a full enterprise CX offering into one measurable surface - a dual-mode agency command center and customer portal, where every AI engagement is priced, delivered, and proven in ROAI.

$$\text{ROAI} = (\text{Value delivered} - \text{AI cost}) / \text{AI cost}$$

A 5.0x ROAI means every \$1 of AI spend returned \$5 of measured value - hours saved plus revenue uplift.

The opportunity

- 2-3x** higher revenue growth for CX leaders
- ~70%** rate experience as important as product or price
- ~60%** of interactions span multiple channels

One platform, two modes

Agency command center

Portfolio ROAI, revenue & margin - client directory & health tiers - ROAI analytics - billing with live Metronome usage data.

Customer portal

A personal ROAI Center - active projects across six pillars - AI marketplace to launch agents - self-serve billing, usage & top-ups.

Six CX pillars, powered by the Vela line

Experience Strategy	Maturity assessment, marketecture, journey analysis
Experience Design	Research, adaptive UI, design systems, usability
Experience Platform	DXP build/re-platform, MarTech, DX engineering
Commerce Platform	Composable commerce, B2B/B2C, accelerators
Experience Insights	CDP & Customer 360, analytics portals, AI agents
Run & Optimize	L1-L3 maintenance, 24x7 monitoring, ops support

Agents: Vela AEO - Answer Engine Optimization - Vela Assist - Governed Assistant - Vela Commerce - Feed Validation - Vela Recs - Recommendation Ranking - Vela Scan - Agent-Readiness Crawl

Buy it by the call - per-call API editions

Vela AEO	\$0.02 / request	GenAI-visibility rewrite + llms.txt block + Article/FAQ JSON-LD
Vela Assist	\$0.25 / session	Governed CX answer with a claims-to-verify list
Vela Recs	\$0.10 / recommendation	Top-N by real cosine similarity, model id and scores shown
Vela Commerce	\$0.03 / API call	Feed item validated to the GTIN check digit, then JSON-LD
Vela Scan	\$0.05 / scan	Agent-readiness crawl: crawler rules, llms.txt, x402, MCP

Settles in XRP or RLUSD over the x402 protocol on the XRP Ledger - usage metered in Metronome - no account, no contract, no sales call. Catalogue at agent-commerce.emergedigital.com/.well-known/x402

Live usage-based billing (Metronome)

The Live panel reads a real Metronome account via a secure read-only proxy (the key never reaches the browser): 7 customers on prepaid-commit or hybrid models, finalized + draft invoices with 6 months of revenue history, commit/credit drawdown, and a full catalog of metrics, products, rate cards and packages.

Proof - real FPT outcomes behind the demo

+200% click-through rate

[Answer Engine Optimization](#) | [Global technology leader](#)

Site ranking #6 (+18) - CTR 3.2% - featured snippets 30%

Cited across 120+ markets

[Answer Engine Optimization](#) | [Global health F&B leader](#)

120+ markets - consistent AI answer boxes - acquisition cost down

MVP in 2 months, not 10

[Commerce](#) | [KSA megaproject \(PIF\)](#)

Time to MVP 2 mo (vs 10) - build time -55% - requirements -40%

Campaign cycles: weeks to minutes

[Data & AI CoE](#) | [FPT x Salesforce ASEAN CoE](#)

First in ASEAN - weeks to minutes - ~100 Agentforce certs by 2026

FPT partners: Adobe (Specialized) - Sitecore (Platinum APAC) - Salesforce (First ASEAN Data & AI CoE) - Liferay (Global Platinum) - Shopify (Plus)

1,000+ certified engineers **1,500+ platform certifications** FPT Corporation's public figures

Run the demo - 7 steps (~6-8 min)

- | | |
|--|--|
| 1. Agency overview | Blended ROAI, revenue and margin across all clients. |
| 2. ROAI analytics | The formula, the trend, the per-pillar breakdown. |
| 3. Client deep dive | Drill into one account + its real case result. |
| 4. Billing -> Live | Real Metronome invoices and commit drawdown. |
| 5. Customer portal | The same engagement, the client's own view. |
| 6. AI marketplace | Launch a new Vela agent in a click. |
| 7. Customer billing & usage | Credits, usage drawdown and top-up. |

Six films on the guide: a 53-second tour of the whole line, plus one short per product (0:40-0:53). Every figure on screen is read from a live API response - nothing is illustrative.

See it live
